

Ideation Phase

Empathize & Discover

Date	29 June 2026
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple and easy-to-understand visual tool used to capture user behaviors, needs, and expectations. It helps project teams better understand users and design solutions that address real challenges. Creating an effective solution requires understanding the actual problem faced by users and considering their goals, frustrations, and expectations.

Uses of an Empathy Map:

- Helps understand the user's needs, expectations, and problems.
- Identifies challenges faced during the network request process.
- Provides insight into user thoughts, actions, and emotions.
- Helps analyze pain points such as delayed approvals and lack of tracking.
- Supports designing a user-friendly and automated solution.
- Improves communication between users and the IT/Network team.
- Helps create efficient workflows in ServiceNow.
- Enables development of solutions that improve user experience and productivity.

EMPATHY CANVAS MAP

Project: **Automated Network Request Management**

Target User / Persona

 **Network Administrator / IT Operations Engineer**

1. THINKS & FEELS

- I want a secure and compliant network environment.
- Managing manual requests is time-consuming.
- I worry about delays impacting end users.
- I need visibility and control over all requests.
- I want to reduce errors and follow standard processes.

2. SEES

- Many network access requests coming from various users.
- Scattered information (emails, chats, spreadsheets, tickets).
- Lack of real-time visibility and status tracking.
- Approval bottlenecks and delays.
- Repetitive and manual tasks.

3. HEARS

- "My request is not approved yet."
- "I need access urgently."
- "Can you check the status of my request?"
- "Why do I need to provide same details again?"
- "The process is taking too long."

Network Admin / IT Operations Engineer

Manages and approves network access requests to ensure security, compliance and smooth operations.

4. SAYS & DOES

- Manually reviews and validates requests.
- Communicates with requesters for clarifications.
- Checks policies, rules and access levels.
- Approves / rejects requests.
- Updates stakeholders about request status.
- Tries to keep track of pending items.

5. PAINS

- Manual and repetitive work increases workload.
- Lack of standardized process leads to inconsistencies.
- Delays in approvals affect business productivity.
- Risk of security violations due to human error.
- Hard to track and report on requests.
- Switching between tools and platforms.

6. GAINS

- Automated workflow reduces manual effort.
- Faster approvals and improved response time.
- Standardized process ensures security and compliance.
- Real-time visibility and status tracking.
- Better reporting and audit readiness.
- Higher satisfaction for users and IT teams.

OVERALL INSIGHT

The target user needs an automated, centralized and policy-driven solution that simplifies request submission, streamlines approvals, improves visibility and ensures secure and efficient network access management.
